*Do You
Think;*

Can your data controllers **easily** create an access authorization and control matrix?

Can you monitor and **track** which roles have access to environments containing personal data?

Can you **instantly** respond to increasing internal threats caused by unnecessary authorizations?

Can you minimize human errors in the identity and authorization creation process from Human Resources to Information Technology, and **robotize** the workflows?

ideal The ideal IDM identity management solution with the answer to these questions **"Yes"**

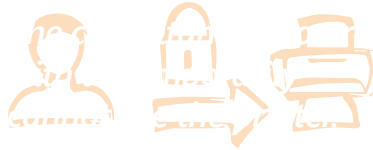

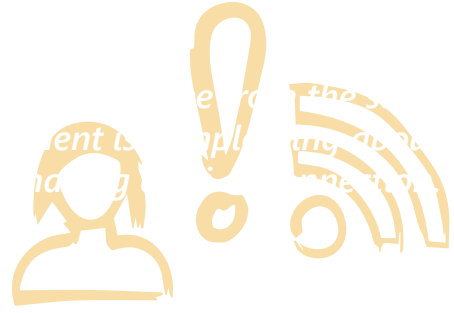

ideal Identity Life Cycle

Simple, automatic, trackable and manageable.

Do these scenarios sound familiar to you too?

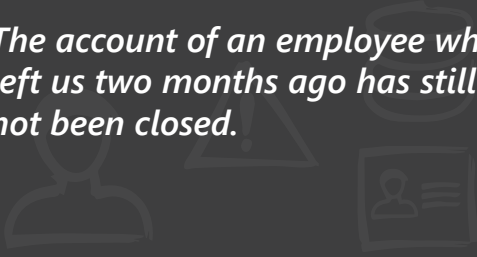

Currently, a consultant who cannot enter the building is waiting at the front door.

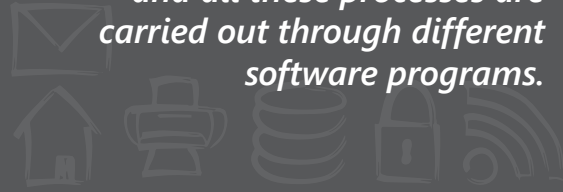

Two new employees are joining us today.

The account of an employee who left us two months ago has still not been closed.

and all these processes are carried out through different software programs.
